

## SOPRASEAL LM 204 VP

**APPLICATIONS** 

**WALLS** 

TECHNICAL DATA SHEET 210104SCANE

supersedes 200526SCANE)

### DESCRIPTION

SOPRASEAL LM 204 VP is a single-component, liquid-applied, vapour-permeable air barrier membrane made of water-reactive elastomers. Used in wall construction, this technology allows continuous and elastic adhesion to the substrate. The high solids content means that this product does not shrink during its curing process. The wet film thickness is therefore equivalent to the dry film thickness.

This product is a fire-resistant vapour-permeable air barrier which provides protection behind wall claddings such as brick, siding, metal panels, EIFS, and stucco. Utilization of a drainage plane is required for stucco cladding.

### RECOMMENDED SUBSTRATES

This product can be used on most building surfaces such as masonry, concrete, wood, and gypsum. **SOPRASEAL LM 204 VP** can also be employed in conjunction with **SOPRASEAL STICK FLASHPRO HT** and **SOPRASEAL LIQUID FLASHING** around openings.

### SURFACE PREPARATION

The substrate should be clean, sound, dry, and free of loose materials, grease and any contaminants that may compromise the performance of the product.

Apply a thick film of SOPRASEAL LIQUID FLASHING into all voids in blocks or concrete, joints in sheathing, and in plywood substrates.

Use a trowel to apply the product into the gap or void. When treating sheathing joints, ensure that a minimum of 60 mils (1.5 mm) is obtained. Create a smooth monolithic surface that will prepare the substrate for the application of **SOPRASEAL LM 204 VP** which will overlap a minimum of 1 in (25 mm) on both sides of the joint.

Once the product is dry to the touch (curing time will be dependent on temperature and humidity levels), application of the SOPRASEAL LM 204 VP can begin.

### **APPLICATION**

The most effective application method for SOPRASEAL LM 204 VP utilizes spray equipment, but a roller or a paint brush may be used.

When spraying, make sure to keep the gun at an angle of about  $90^{\circ}$  to the substrate. Apply SOPRASEAL LM 204 VP to the desired thickness directly onto the prepared substrate. Applications that require greater thickness may justify two coats to obtain the proper adhesion of the product.

Once the application is complete, inspect the wall for any areas that need touch-ups. Apply additional SOPRASEAL LM 204 VP in these areas if needed.

Drying time will vary depending on ambient and substrate temperature, humidity, and the ability of the substrate to absorb water.

NOTE: - Do not apply SOPRASEAL LM 204 VP at ambient temperatures below -4  $^{\circ}$ C (25  $^{\circ}$ F).

The material should be kept at a minimum temperature of 4 °C (40 °F) during application.

- The minimum curing temperature is -4 °C (25 °F) and it must be maintained for the length of curing process.
- Do not use SOPRASEAL LM 204 VP for below grade applications or on surfaces suject to water immersion.
- UV light exposure should not exceed 180 days.

FOR COMPLETE INFORMATION ON PRODUCT INSTALLATION, PLEASE CONSULT YOUR SOPREMA REPRESENTATIVE.

### **PACKAGING**

Specifications	SOPRASEAL LM 204 VP
Colour	Blue
Solids	98 %
Volume	19 L (5 US gal) 189 L (50 US gal) <sup>(1)</sup>

(All values are nominal)

### STORAGE AND HANDLING

The shelf life of **SOPRASEAL LM 204 VP** is approximately 24 months, when properly kept in the original sealed container. Store materials at temperatures above 4 °C (40 °F) at all times. Protect from extreme heat and direct sunlight.

FOR MORE INFORMATION, REFER TO INSTRUCTIONS ON THE CONTAINER LABEL AND RELEVANT SAFETY DATA SHEET (SDS).
